MID:COM 8000

MID:COM 8000 is the workhorse of our product line. It is the ultimate, rugged, easy to use cab mounted computer, printer and data transfer system. Using the SD Data Card the driver has access to 50,000 complete customer records. An easy to follow menu guides the driver through the delivery process. Many of the most popular Software providers offer a **MID:COM** interface that provides automatic posting from the data card to your accounts receivables.

Return on Investment

- **Electronic Temperature Compensator reduces shrinkage by 1%**
- **Increases driver efficiency by 10% to 15%**
- **Reduces meter maintenance by 50%**
- **Eliminates handwritten tickets and driver pricing errors**
- **Reduces ticket posting time by 90% and eliminates posting errors**
- **Eliminates postage costs**

COMLINK

COMLINK This simple button reading system works with the **MID:COM 8000** computer system, to greatly reduce the labor involved for fleet fueling or on-site fueling operations. The rugged RF transmitter (wand) and cab mounted receiver send vehicle or equipment identification to the computer. Each unit being fueled is equipped with a Dallas iButton®. These rugged stainless steel iButtons® come standard with a unique serial number and are also available in a programmable format. When programmed they can show actual unit identification and can prevent dispensing the wrong fuel by not opening the valve if the wrong fuel is selected.

Using this system keeps the driver at the end of the hose while the computer keeps track of what fuel and how much went into each unit. Unit identification, date, time and volume are recorded on the data card and a separate roll printer.

XCELLINK 8000

XCELLINK 8000 has all of the standard features of the original 8000 except data cards. Priced about 20% less than the original makes it a cost effective choice when combined with other data transfer alternatives.

XCELLINK 8000 can be used as a stand alone system, producing tickets with price extensions, multiple taxes and cash discounts. **MID:COM 6501** users can upgrade and still use the same ticket or switch to the 8000 ticket format. Upgrading to use data cards is quick and easy.

8000

MID:COM Products allow our users to move data collected by our systems via the Internet. Once this information is on line it can be accessed by their customers to monitor fuel usage of their fleets. Others use wireless devices to move data from the truck to the office and back. All of our systems are rugged special purpose devices. Connecting to the rest of the world is business as usual at **MID:COM**.

SMARTLINK

SMARTLINK was developed to replace all mechanical registers, ticket printers, presets, valves and temperature compensators. It can be used as a stand alone system or connect to general purpose computers. Upgrading to the 8000 system is easier than ever, since nothing on the meter has to change. Only the components in the cab of the truck require changing.

SMARTLINK

e:Count

e:Count is more than just an electronic counter or register. It's the state of the art for easy mounting and use on any brand or type of meter.

Features include:

- Large easy to read alpha numeric display
- Easy to follow legends for all operations
- Self contained calibration and set up functions
- Accepts any type of pulse input
- Built in Enduro Switch® control keys (for harsh environments)
- Sealed connectors including power, valve control and remote readout
- Field programmable for custom applications
- Eliminate change gears, adjusters, linkages and other mechanical parts
- Works with **MID:COM** 6501 – SMARTLINK – 8000 Systems – general purpose computers and other common industry peripheral components

*The most important feature is it was developed by the one company that has supplied easy to use electronic systems for the truck meter business for almost 30 years, **MID:COM**.*

MID:COM

Proven Performance - Defining the Future

About MID:COM

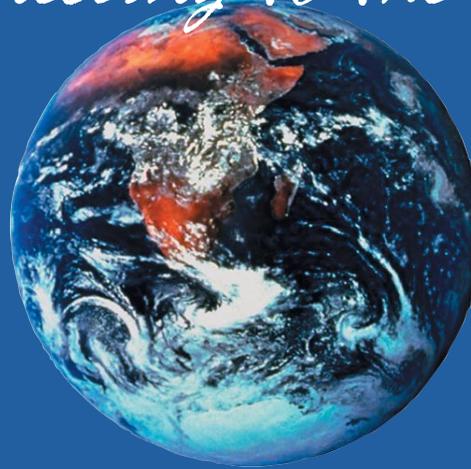

MID:COM pioneered the computer register business in 1975. There are over 30,000 of our computers and registers operating in all types of weather, from tropical heat, humidity and salt air to the bitter cold of the Arctic Circle.

MID:COM systems accurately account for billions of gallons of product everyday.

MID:COM products are easy to operate as stand alone systems. They can be used with GPS antennas to geocode tank locations, with cell phones or radios to provide real time data transfer or with general purpose computers.

If you are considering the automation of your delivery trucks, please let us show you how the Proven Performance of **MID:COM** can help you Define the Future of your business.
